What are outposts racks?

Outposts racks are designed for high availability with redundant network switches and power connections. You can also provision your Outpost compute racks with additional capacity for resiliency. AWS delivers the Outposts racks to your preferred physical site fully assembled and ready to be rolled into final position.

How are outposts racks installed?

Outposts racks are delivered and installed by AWS technicians into a facility of your choice. Outposts racks come in casters to easily roll the racks into the desired space in your facility. Stands are installed in-place. Below are the facility requirements for Outposts compute racks and the Outposts network rack.

What power configurations does the outposts network rack support?

The Outposts network rack power shelf supports one power configuration. A central power bus bar in the back to distribute power to each server. We have whips supporting a variety of common power types. Each Outposts compute rack supports 10KVA-30KVA power supply and redundant feeds. Each Outposts network rack requires 8.89 KVA power supply.

Who is responsible for securing outposts racks?

AWS is responsible for protecting the infrastructure of Outposts racks similar to how it secures infrastructure in the AWS Regions today. Customers are responsible for securing their applications running on Outposts racks as they do in the Region today.

A logical Outpost deployment consists of one or more physical Outposts racks with compute, storage, and networking capabilities within each rack. Inside we have hosts, switches, a network patch panel, ...
